Faronics System Profiler

System Requirements

Faronics System Profiler works with computers running Windows XP SP3 or later (32 and 64 bit), and Windows Vista SP1 (32 and 64 bit), Windows 7 (32 and 64 bit) Windows Server 2003 and 2008 (32 and 64 bit). Information on Faronics Core system requirements can be found in the Faronics Core user guide.

Powerful Inventory Tools

- Query an extensive range of workstation hardware and software information across a deployment
- Search for information that meets any specified criteria
- Current and historical workstation information stored in central Faronics Core Database
- Specialized status data for other installed Faronics products

Detailed Inventory Reports

- Change reports easily identify changes on a single workstation over time
- Compare two workstations quickly with comparison reports and identify differences
- Export reports into CSV format to be used in other reporting software or to allow for further customization
- Identify remaining drive space with disk usage reports by workstation
- Identify hardware changes that occurred on a workstation with hardware changes reports
- View list of software and current versions with software inventory reports

Central Management and Integration

- Managed through Faronics Core
- Easily integrates with other Faronics solutions
- Report information can be utilized in other Faronics solutions
- Dynamic filtering groups help with daily operations or large projects such as patching, hardware upgrades, etc...
